

Occupational Health Services

Bloodborne Pathogen Exposure Protocol for Emory Employees

Emory Employees will be seen in Occupational Health Services for blood exposures during our business hours: Monday thru Friday 7:30 AM- 4:00 PM. OHS is closed on weekends and holidays. During the off hours, should there be a blood or body fluid exposure requiring post exposure prophylaxis (PEP) or additional treatment, employees will be seen immediately in an Emory Emergency Department (ED).

Please follow the guidance below:

If an Emory Employee presents to an Emory ED outside of OHS business hours and has had a blood or body fluid exposure (mucous membrane splash, needlestick, blood on non-intact skin, etc.) with either 1) a known HIV (+) patient or 2) an unknown HIV status (patient left and is unable to be tested, patient refused HIV testing, patient is deceased and testing not available, or source of BBP is unknown) please do the following:

1. **Page the OHS APP On Call: 404-686-5500, PIC Number 50464 (EHConnect)**
 - a. Do Not page the Infectious Disease Attending or Resident or Hospital Epi
 - b. The OHS APP On Call will promptly respond and provide guidance after learning the details of the exposure and the source patient. The APP will consult Hospital Epi if needed.
2. If deemed appropriate, the OHS APP On Call will instruct the ED provider to dispense the recommended PEP (one dose during visit & 3-day supply at discharge):
Emtricitabine/Tenofovir (Truvada®) 200/300 mg AND Dolutegravir (Tivicay®) 50 mg.
 - a. **Single dose of the above PEP will be administered during the ED visit.**
 - b. **Prior to discharge, dispense a 3-day PEP Pack to the Employee, which will be:**
 - i. **Emtricitabine 200mg PO QD for 3 days (3 doses)**
 - ii. **Tenofovir 300mg PO QD for 3 days (3 doses)**
 - iii. **Dolutegravir 50 mg PO QD for 3 days (3 doses)**
 - iv. **The three medications listed above (PEP pack) will be dispensed from the inpatient pharmacy to the Employee upon discharge.**

- c. OHS or the On Call APP will handle the remaining Rx for PEP as this will need to be covered under Emory's Workers' Compensation insurance.
- 3. **The ED provider does not need to draw any baseline labs as these will be drawn the next business day in our OHS Office (Please do not draw HIV ag/ab, HBSAG, or HCVab on any employee in their personal medical file).**
- 4. The Administrative Nursing Supervisor (ANS) will order any appropriate labs on the source patient. No ED Provider should order source labs in EPIC—this will be done by the ANS or the OHS APP On Call.
- 5. Please instruct the Emory Employee to follow up in our OHS office the next business day and instruct them to fill out an incident report in HOME as soon as possible.
 - a. If a non-Emory Employee (paramedic, agency nurse, contractor, or community provider with privileges at an Emory facility, etc.) is exposed to blood or body fluids, ALWAYS defer the source patient ordering to the ANS (if after hours) and OHS (if during hours) so that the patient is not charged and these incidents can be properly documented in compliance with OSHA standards. Instruct the non-Emory Employee to notify their Employer's Workers' Compensation office as soon as possible and follow their Employer's policy for any follow-up. Independent contractors should follow up with their PCP if required.
- 6. Discharge the patient
 - a. Select **ED OHS Blood Borne Pathogen Exposure Discharge**.
 - b. This will load OHS discharge instructions / follow up.
 - c. Preview / Print AVS

Instructions

Discharge Instructions for Emory Employees/Emory Students exposed to blood or body fluids and treated in an Emory Emergency Room

1. Please complete an incident report in HOME (Emory's Occupational Health Record System) as soon after your blood exposure as possible. Please include the source patient's name, MRN, and DOB within your report.
2. Follow-up with one of our Occupational Health Services Clinics the next business day. (Refer to locations above).
3. If you have been started on PEP (post exposure prophylaxis) related to an unknown or HIV (+) exposure, please be sure you have spoken with the OHS APP (Advanced Practice Provider) On Call to ensure you have a follow-up appointment with OHS. You will need this appointment for baseline labs and to obtain the prescription for the remainder of your 28-day prophylactic medication.
 - a. You can reach the OHS APP On Call by dialing: 404-686-5500, enter Pager ID # 50464 and when prompted enter a 10-digit phone number so that you can be reached.
4. If you are a contractor and employed outside of Emory, be sure to follow your company's policy and provide prompt notification of this incident.

Go to Emory Decatur Hospital in 1 day (around 4/18/2025)
